## SURVEY METHODS

The California Agricultural Statistics Service (CASS) annually conducts an acreage survey of California grape growers. This is a continuation of a long series of annual surveys to provide grape acreage by variety and year planted.

Users are cautioned that this report consists of two parts:

- Estimated grape acreage, bearing and non-bearing -- The first table shows estimated bearing and non-bearing grape acreage by type (Page 2). The second table shows estimated wine-type grape bearing acreage by variety (Page 3).
- Detailed data by variety, year planted, and county -- As voluntarily reported by grape growers and maintained in CASS's data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- A voluntary census of approximately 10,000 grape growers is unlikely to ever attain 100 percent completeness.
- It is extremely difficult for a small staff in Sacramento to detect growers that are planting grapes for the first time.
- The detailed data reflects vine removals from more than 21,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2004 prior to being pulled out, and that acreage has already been removed from the detailed data.

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in CASS's data base. The mailing was made in September 2004 to approximately 10,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail or telephone.

To arrive at the estimated grape acreage, the CASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2002 would not be bearing until 2005). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2004 onto a 1980 variety is recorded as planted in 2003). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2004. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2002 rootstock planting was budded over in 2004, the year of planting assigned to the selected variety was 2003. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2004 survey was to record removals of grapes since the 2003 harvest and new planting of grapes during 2004. Acreage abandoned in 2004 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2004 grape acreage is estimated by the California Agricultural Statistics Service (CASS) at 853,000 acres. Of the total acres, 800,000 were bearing and 53,000 were non-bearing. The breakdown by type is as follows: Raisin type totaled 248,000 acres with 244,000 bearing and 4,000 non-bearing; Table type totaled 92,000 acres with 83,000 bearing and 9,000 non-bearing; Wine type totaled 513,000 acres with 473,000 bearing and 40,000 non-bearing.

The leading wine type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless is the leading table type grape. Thompson Seedless continues to be the leading raisin type variety and is used for raisins, fresh market, concentrate and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

A special thanks is due the following office staff for the hundreds of hours spent on this project: Kelly Albello, Jeff Olson, Pam Benner, Pearl Gonzalez, Ann Jehn, Lupe Oropeza, Cordia Weems and Sheryl Zazzi.

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- Estimated grape acreage -- bearing, non-bearing, and total.
- Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- A voluntary survey of approximately 9,000 grape growers is unlikely to ever attain 100 percent completeness.
- It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- The detailed data reflects vine removals from more than 19,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2005 prior to being pulled out. As a result, harvested acreage removed in 2005 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on NASS' data base. The mailing was made in late September 2005 to approximately 9,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2002 would not be bearing until 2005). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2004 onto a 1980 variety is recorded as planted in 2003). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2005. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2002 rootstock planting was budded over in 2004, the year of planting assigned to the selected variety was 2003. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2005 survey was to record removals of grapes since the 2004 harvest and new planting of grapes during 2005. Acreage abandoned in 2005 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2005 wine-type grape acreage is estimated at 522,000 acres. Of the total acres, 477,000 were bearing and 45,000 were non-bearing. Table-type grape acreage totaled 93,000 acres with 83,000 bearing and 10,000 non-bearing. Acreage of raisin-type grapes totaled 246,000 acres, of which 240,000 were bearing and 6,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albello, Carol Cole, Peggy Gibson, Pearl Gonzalez, Ann Jehn, Jeff Olson, Lupe Oropeza, Cordia Weems, and Sheryl Zazzi.

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- ▶ A voluntary survey of approximately 8,500 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from more than 22,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2006 prior to being pulled out. As a result, harvested acreage removed in 2006 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on NASS' data base. The mailing was made in late September 2006 to approximately 8,500 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years ( i.e., acres planted in 2003 would not be bearing until 2006). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year ( i.e., Chardonnay grafted in 2005 onto a 1981 variety is recorded as planted in 2004). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2006. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2003 rootstock planting was budded over in 2005, the year of planting assigned to the selected variety was 2004. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2006 survey was to record removals of grapes since the 2005 harvest and new planting of grapes during 2006. Acreage abandoned in 2006 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2006 wine-type grape acreage is estimated at 527,000 acres. Of the total acres, 480,000 were bearing and 47,000 were non-bearing. Table-type grape acreage totaled 93,000 acres with 83,000 bearing and 10,000 non-bearing. Acreage of raisin-type grapes totaled 240,000 acres, of which 234,000 were bearing and 6,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albelo, Peggy Gibson, Pearl Gonzalez, Ann Jehn, Jeff Olson, Lupe Oropeza, Cordia Weems, and Sheryl Zazzi.

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- ▶ Estimated grape acreage -- bearing, non-bearing, and total.
- ▶ Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- ▶ A voluntary survey of approximately 8,100 grape growers is unlikely to ever attain 100 percent completeness.
- ▶ It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- ▶ The detailed data reflects vine removals from about 25,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2007 prior to being pulled out. As a result, harvested acreage removed in 2007 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on NASS' data base. The mailing was made in late September 2007 to approximately 8,100 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2005 would not be bearing until 2008). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2005 onto a 1981 variety is recorded as planted in 2004). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2007. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2003 rootstock planting was budded over in 2005, the year of planting assigned to the selected variety was 2004. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2007 survey was to record removals of grapes since the 2006 harvest and new planting of grapes during 2007. Acreage abandoned in 2007 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 10). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2007 wine-type grape acreage is estimated at 523,000 acres. Of the total acres, 480,000 were bearing and 43,000 were non-bearing. Table-type grape acreage totaled 92,000 acres with 82,000 bearing and 10,000 non-bearing. Acreage of raisin-type grapes totaled 233,000 acres, of which 227,000 were bearing and 6,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albello, Peggy Gibson, Pearl Gonzalez, Jeff Olson, Lupe Oropeza, Cordia Weems, and Sheryl Zazzi.

APRIL 2009

This detailed report was published in May or June until 2005, but was changed to an April release date in 2006. The release date was changed to provide data users with more timely information.

This report is available free-of-charge on our web site at [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca). You may access the entire bulletin, as well as individual tables, in Adobe Portable Document Format and Excel spreadsheet format. Also on our web site is "Subscribe to CA Reports," which is where you may order e-mail subscriptions or hard copies of releases.

To order a hard copy of the California Grape Acreage annual bulletin by mail:

Mail your request with remittance to:	USDA-NASS, California Field Office
	P.O. Box 1258

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- Estimated grape acreage -- bearing, non-bearing, and total.
- Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- A voluntary survey of approximately 8,100 grape growers is unlikely to ever attain 100 percent completeness.
- It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- The detailed data reflects vine removals from about 25,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2008 prior to being pulled out. As a result, harvested acreage removed in 2008 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on NASS' data base. The mailing was made in late September 2008 to approximately 8,100 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years ( i.e., acres planted in 2005 would not be bearing until 2008). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year ( i.e., Chardonnay grafted in 2006 onto a 1982 variety is recorded as planted in 2005). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2008. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2004 rootstock planting was budded over in 2006, the year of planting assigned to the selected variety was 2005. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2008 survey was to record removals of grapes since the 2007 harvest and new planting of grapes during 2008. Acreage abandoned in 2008 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2008 wine-type grape acreage is estimated at 526,000 acres. Of the total acres, 482,000 were bearing and 44,000 were non-bearing. Table-type grape acreage totaled 93,000 acres with 83,000 bearing and 10,000 non-bearing. Acreage of raisin-type grapes totaled 225,000 acres, of which 221,000 were bearing and 4,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albello, Peggy Gibson, Pearl Gonzalez, Katherine Graham, Jeff Olson, Lupe Oropeza, Cordia Weems, and Sheryl Zazzi.

APRIL 2010

This detailed report was historically published in May or June until 2005, but changed to an April release date in 2006. The release date changed to provide data users with more timely information.

This report is available free-of-charge on our web site at [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca). You may access the entire bulletin, as well as individual tables, in PDF and Excel spreadsheet format. Also on our web site is a link to *Subscribe to CA Reports*, where you may order e-mail subscriptions or hard copies of releases.

To order a paper copy of the California Grape Acreage annual bulletin by mail:

Mail your request with remittance to:      USDA-NASS, California Field Office  
P.O. Box 1258  
Sacramento, CA 95812

Make your check or money order payable to: **USDA-NASS/CDFA**

Cost: \$10.00 each

**Include your return address.**

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- Estimated grape acreage -- bearing, non-bearing, and total.
- Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- A voluntary survey of approximately 8,000 grape growers is unlikely to ever attain 100 percent completeness.
- It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- The detailed data reflects vine removals from about 21,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2009 prior to being pulled out. As a result, harvested acreage removed in 2009 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included on NASS' data base. The mailing was made in late September 2009 to approximately 8,000 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2006 would not be bearing until 2009). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2006 onto a 1982 variety is recorded as planted in 2005). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2009. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2004 rootstock planting was budded over in 2006, the year of planting assigned to the selected variety was 2005. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2009 survey was to record removals of grapes since the 2008 harvest and new planting of grapes during 2009. Acreage abandoned in 2009 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2009 wine-type grape acreage is estimated at 531,000 acres. Of the total acres, 489,000 were bearing and 42,000 were non-bearing. Table-type grape acreage totaled 93,000 acres with 84,000 bearing and 9,000 non-bearing. Acreage of raisin-type grapes totaled 219,000 acres, of which 216,000 were bearing and 3,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albelo, Peggy Gibson, Pearl Gonzalez, Katherine Graham, Jeff Olson, Lupe Oropeza, Jennifer Travis, Cordia Weems, and Sheryl Zazzi.

## SURVEY METHODS

The California Field Office of the USDA's National Agricultural Statistics Service (NASS) conducts an annual acreage survey of California grape growers. The purpose of this survey is to provide annual grape acreage with information on new plantings and removals. It is a continuation of a long series of industry-funded grape acreage surveys.

Users are cautioned that this report consists of two parts:

- Estimated grape acreage -- bearing, non-bearing, and total.
- Detailed data by variety, and year planted -- as voluntarily reported by grape growers and maintained in NASS' data base.

With perfect information, the estimated grape acreage and the detailed data would be the same. However, this will never be the case for the following reasons:

- A voluntary survey of approximately 8,300 grape growers is unlikely to ever attain 100 percent completeness.
- It is difficult for USDA, NASS to detect growers who are planting grapes for the first time.
- The detailed data reflects vine removals from about 13,000 acres during the past twelve months. Of this number, significant acreage was harvested in 2010 prior to being pulled out. As a result, harvested acreage removed in 2010 is included in the estimated acreage, but excluded from the detailed data.

## PROCEDURES

The major source of the grape detailed data was a questionnaire mailed to all grape growers included in NASS' data base. The mailing was made in late September 2010 to approximately 8,300 grape growers. The questionnaire contained previously reported crop, variety, and acreage information preprinted. Producers were asked to update the information with new plantings, removals, and any other corrections; new growers were mailed a blank questionnaire. Growers were given six weeks to respond by mail. A telephone follow-up was then undertaken. Field personnel personally visited large growers who did not respond by mail.

To arrive at the estimated grape acreage, the NASS grape acreage data base was compared with data provided from the pesticide application data maintained by County Agricultural Commissioners and the Department of Pesticide Regulation.

## DATA CLARIFICATIONS

Bearing and Non-bearing Acreage: For purposes of this publication, all varieties are considered non-bearing for three years (i.e., acres planted in 2007 would not be bearing until 2010). The only exceptions are the Thompson Seedless variety and all table type grapes in Imperial and Riverside counties, which are of bearing age after one year.

Grafting: Graftings on bearing acres are recorded as planted in the previous year (i.e., Chardonnay grafted in 2008 onto a 1982 variety is recorded as planted in 2007). This assumes that grafted vines will actually bear a full crop in two years as opposed to three years for a newly planted vine.

Varieties: Data are provided for each variety with 50 or more total acres standing in 2010. Acreage for all other varieties are combined in "Other" categories. Care was taken to properly identify each block reported with a recognized varietal name.

Rootstock: Most of the rootstock shown was planted in the past three years. However, some earlier plantings are included. When rootstock was budded over, the year of planting assigned to that block of grapes was the year preceding the budding. For instance, if a 2006 rootstock planting was budded over in 2008, the year of planting assigned to the selected variety was 2007. (See Grafting.) Nursery rootstock is not included.

Period Covered: The primary intent of the 2010 survey was to record removals of grapes since the 2009 harvest and new planting of grapes during 2010. Acreage abandoned in 2010 was excluded from bearing acreage. Planting activity is accounted for on a calendar-year basis.

Grape Crush Districts: Grape acreage data is also being published by grape crush districts (Table 12). A map with descriptions of those districts is located on the inside front cover.

## RESULTS

California's 2010 grape acreage totaled 842,000 acres. Of the total grape acreage, 792,000 were bearing while 50,000 were non-bearing. The wine-type grape acreage is estimated at 535,000 acres. Of the total acres, 497,000 were bearing and 38,000 were non-bearing. Table-type grape acreage totaled 94,000 acres with 85,000 bearing and 9,000 non-bearing. Acreage of raisin-type grapes totaled 213,000 acres, of which 210,000 were bearing and 3,000 were non-bearing.

The leading wine-type varieties continued to be Chardonnay and Cabernet Sauvignon. Flame Seedless was the leading table-type grape variety. Thompson Seedless continued to be the leading raisin-type variety and was utilized for raisins, fresh market, concentrate, and wine.

## ACKNOWLEDGMENTS

We sincerely thank the many farm operators, owners, and management firms providing the information. Funding was provided by an assessment on wine grapes plus funding from the California Table Grape Commission and the Raisin Administrative Committee.

Several County Agricultural Commissioners provided a significant number of individual grower changes. We would particularly acknowledge the work of the Merced, Napa, and Sonoma county staff.

Appreciation is due the following office staff for the hundreds of hours spent collecting and processing survey information: Kelly Albello, Peggy Gibson, Pearl Gonzalez, Katherine Graham, Jeff Olson, Lupe Oropeza, Kim Moreno, Cordia Weems, and Sheryl Zazzi.
